| Recording format | WAV | Recording bit rate | 192KBPS |
| Play format | MP3/WMA/WAV | Sampling Rate | 48KHz |

## Machine charging

1. Use the original data cable to connect the machine directly to the computer or charger for charging.

It is recommended to connect the unit to the computer for charging.

2. Please use a power adapter with a charging **current of 1A or less** for charging, otherwise it may damage the machine or cause danger (this product does not have a standard power adapter).

3. During the charging state, the voice recorder flashes red light; Fully charged state, it will always blue light on.

## Notes:

1. When charging or connecting to a computer, reset the switch first. When unplugging, wait for the light to turn off before using it.

2. After recording, regardless of whether the recorder is powered or not, you must put the switch to off position to save the recording file, otherwise the recording file will be lost.

**This machine comes with an intelligent reset system, please save the recording file before connecting to the computer. Since the recording effect and sound quality of this product are relatively clear and the parameters are relatively high, the recording file is relatively large, please extract it in time. The company is not responsible for the loss of data.**

**It cannot record Suddenly**

Please back up important files first and format them on the computer. If they can be used normally after formatting, please clean up the computer in time. This is a computer virus infection of the voice recorder, causing the voice recorder to be unusable. It will cause damage to the machine beyond repair after a long time .

**The indicator light does not respond or keeps on in an abnormal state**

Please back up important files first, and then restore the factory settings. After connecting to the computer, click My Computer, find the mobile drive letter and right-click the mouse, select Format, and then select Quick Format. In this way, the factory reset can be completed, and most of the faults can be eliminated.

**No response after connecting to the computer**

First check whether the plug is inserted in place. If the computer still does not respond, try to connect to a different computer. Some computers cannot be recognized because of lack of drivers. If you still cannot recognize it after trying, you can contact after-sales upgrade or after-sales service.
